Amdt./Response submitted Oct. 12, 2004

Replying to Office Action dated July 12, 2004

PATENT Customer No. 22,852 Attorney Docket No. 10004024-2

This listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims:

1. (Canceled)

2. (Currently amended) <u>AThe</u> disposable cartridge of claim 1 that operates in conjunction with a point-of-care analytical device, said cartridge comprising:

a network of conduits and reservoirs within said cartridge; and

at least one micro pump fluidly coupled to said network for transporting small volumes of biological fluid, said pump comprising:

a rotatable portion having a magnetic core and configured to be rotatable by alternating inductive magnetic fields to urge fluid through said network,

wherein said rotatable portion comprises a microscopic paddle wheel.

3. (Currently amended) <u>AThe</u> disposable cartridge of claim 1 that operates in conjunction with a point-of-care analytical device, said cartridge comprising:

a network of conduits and reservoirs within said cartridge; and

at least one micro pump fluidly coupled to said network for transporting small volumes of biological fluid, said pump comprising:

a rotatable portion having a magnetic core and configured to be rotatable by alternating inductive magnetic fields to urge fluid through said network,

wherein said rotatable portion has a hydrophobic surface.

Customer No. 22,852

Attorney Docket No. 10004024-2

4. (Currently amended) The disposable cartridge of claim 24 wherein said alternating inductive

magnetic fields provide a torsion force to the rotatable portion that does not exceed the level that

would lyse or puncture blood cells.

5. (Currently amended) The disposable cartridge of claim 21 wherein a plurality of micro

pumps are placed within the network of the cartridge.

6. (Canceled)

7. (Currently amended) The point-of-care device of claim 86 wherein the electromagnet is

reused with successive disposable cartridges and the rotatable portion is contained in the

cartridge and does not contaminate the electromagnet.

8. (Currently amended) AThe point-of-care analytical device, said device comprising: of claim 6

a disposable cartridge;

a network of conduits and reservoirs within said cartridge;

a micro pump fluidly coupled to said network for transporting small volumes of

biological fluid, said pump comprising a rotatable portion configured to be rotatable by

alternating inductive magnetic fields to urge fluid through said network; and

an external electromagnet providing said alternating inductive magnetic fields for causing

the rotatable portion to move to transport small volumes, said electromagnet positioned external

to said disposable cartridge and fluidically isolated from said micro pump;

Customer No. 22,852

Attorney Docket No. 10004024-2

wherein said rotatable portion comprises a microscopic paddle wheel coupled inductively

to said external electromagnet.

9. (Currently amended) The point-of-care of device of claim <u>86 comprises a system</u> where<u>in</u>

anthe actual pumping mechanism of the micro pump is completely isolated from said external

electromagnet.

10. (Currently amended) AThe point-of-care analytical device, said device comprising: es a

system

a disposable cartridge;

a network of conduits and reservoirs within said cartridge;

a micro pump fluidly coupled to said network for transporting small volumes of

biological fluid, said pump comprising a rotatable portion configured to be rotatable by

alternating inductive magnetic fields to urge fluid through said network; and

an external electromagnet providing said alternating inductive magnetic fields for causing

the rotatable portion to move to transport small volumes, said electromagnet positioned external

of said disposable cartridge and fluidically isolated from said micro pump;

wherein said rotatable portion comprises a microscopic paddle wheel coupled inductively

to said external electromagnet; and

wherein the paddle wheel to actuate the motion may be separated by either plastic or

silicon and still maintain an inductive coupling with the paddle wheel such that the magnetic

core spins by rotating the magnetic field.

Replying to Office Action dated July 12, 2004

PATENT Customer No. 22,852

Attorney Docket No. 10004024-2

11. (Original) The point-of-care device of claim 8 wherein the electromagnet comprises a micro-

coil which causes the paddle wheel to move according to the alternating field in the micro-coil.

12. (Original) The point-of-care of claim 8 wherein the paddle wheel in micro-pump conduits

that contain paddle wheel chambers to house the paddle wheels recessed in the conduits to

facilitate cartridge assembly.

13. (Original) The point-of-care device of claim 8 where the paddle wheels act as valves in the

network to isolate the biological fluid prior and after pumping to control reaction time and isolate

analytical reactions.

14. (Currently amended) The point-of-care of device of claim 86 wherein said alternating

inductive magnetic fields provide a torsion force to the rotatable portion that does not exceed the

level that would lyse or puncture blood cells.
